
Outside the model's domain: $V_A > 1$
$V_{A,max}(\delta) = \frac{1-\delta}{4\kappa\delta}$
band: κ = 1 (no pair bond) to 2 (strict monogamy)
purple : linked ceiling $\frac{\overline{\Omega}(V_A)-\delta}{4\kappa\delta}$, per population
ceiling enters the domain
at δ = 0.11–0.2
Additive genetic variance in relative fitness, V_A
Observed diversity relative to its neutral expectation, $\delta = \pi/4\mu N_c$
